

MODIFICATIONS TO PREVENT OCCURRENCES OF F10 ERROR

Modifications have been made to the software to prevent occurrences of the F10 error (Doc Mod Not = A). This error often occurred when appropriation year was changed by overtyping AND when the YR or YP interface type was not used.

The ADPICS 2100 Requisition Header Entry screen and the 2360 Direct Purchase Order screen will be affected by the software change. When an Advice of Change has been created and posted, the interface type on the header will default to a blank. It will be necessary for the user to enter the correct interface type:

DP for purchase orders with no AY change

RQ for requisitions with no AY change

YP for purchase orders with AY change

YR for requisitions with AY change

When the single and percentage accounting distribution methods are used, an edit will prevent the user from overtyping the AY unless the correct interface type has been used (YP or YR). It will also prevent overtyping any other elements of the coding block.

This modified software will be available in production on July 24, 1997.
